U.S. Environmental Protection Agency Reviews Cleanup at the Shenandoah Road Groundwater Contamination Superfund Site

The U.S. Environmental Protection Agency (EPA) is conducting its first five-year review of the **Shenandoah Road Groundwater Contamination Superfund Site**, located in Hopewell Junction, Town of East Fishkill, Dutchess County, New York. This review seeks to confirm the remedy selected by EPA in the 2012 Record of Decision (ROD) is protective of human health. The selected remedy consists of the following components:

- Operation of a groundwater pump and treat system
- Monitored natural attenuation of the groundwater plume
- Long-term groundwater monitoring
- Implementation of institutional controls

A summary of the Five-Year Review activities and an evaluation of the long-term protectiveness of the remedy will be included in the upcoming Five-Year Review report. **The report is scheduled to be completed by Summer 2018.**

What is an EPA Five-Year Review?

EPA inspects Superfund sites every five years to ensure that cleanups conducted remain fully protective of human health and the environment. These regular reviews, which are required by federal law when contaminants remain at a site, include:

- Inspection of the site and cleanup technologies;
- Review of monitoring data, operating data, and maintenance records, and
- Determining if any new regulatory requirements have been established since EPA's original cleanup decision was finalized.

For more information

There are several ways to review information on this site. The Administrative Record, which includes EPA decision documents used for selecting the cleanup remedy, is available for public review at the information repository listed below. Project information is also available online at the website noted below.
